with the increasing loss of biological diversity in this sixth age of mass extinction it is timely to show that devolutionary paranoia is not new but rather stretches back to the time of charles darwin it is also an opportune moment to show how human driven extinction as designated by the term anthropocene

has long been acknowledged the halcyon days of european industrial progress colonial expansion and scientific revolution trumpeted from the great exhibition of 1851 until the dresden international hygiene exhibition of 1930 were constantly marred by fears of rampant degeneration depopulation national decline environmental devastation and racial extinction this is demonstrated by the discourses of catastrophism charted in this book that percolated across europe in response to the theories of darwin and jean baptiste lamarck as well as marcellin berthelot camille flammarion ernst haeckel louis landouzy félix le dantec cesare lombroso thomas huxley bénédite augustin morel louis pasteur Élisée reclus rudolf steiner and wilhelm wundt among others this book presents pioneering explorations of the interrelationship between these discourses and modern visual cultures and the ways in which the picturing of evolution and extinction by artists as diverse as roger broders albert besnard fernand cormon hélène dufau Émile gallé františek kupka pablo picasso carles mani y roig sophie taeuber and vasilii vatagin betrayed anxieties subliminally festering over degeneration alongside latent hopes of regeneration following darwin s concept of evolution as janus faced the dialectical interplay of evolution and extinction and degeneration and regeneration is explored in modern visual cultures in australia america britain france germany russia spain and switzerland at significant spatio temporal junctures between 1860 and 1930 by unravelling the picturing of the dread of alcoholism cholera dysentery tuberculosis typhoid and rabies alongside phobias of animalism criminality hysteria impotency and ecological disaster each chapter makes an original contribution to this new field of scholarship by locating these discourses and visual cultures within the golden age of neo lamarckism they also reveal how regeneration was pictured as the janus face of degeneration able to facilitate evolution through the inheritance of beneficial characteristics in propitious environments in striking such an uplifting note amidst the dissonant cacophony of catastrophism this book reveals why the art and science of transformism proved so appealing in france as elsewhere and why visual cultures of regeneration became as dominant in the twentieth century as the picturing of degeneration had been in the nineteenth century it also illuminates the paradoxical inversion that occurred in the twentieth century when devolution became equivalent to evolution for many modernists hence whilst this book opens with the picturing of indigenous people in australia and north america as doomed races by the first publication of darwin s on the origin of species it closes with the quest by 1930 for a regenerative suntan as dark as the skin of those indigenous people
